airtel

SYNC

AirtelSync

Small businesses go digital in one sitting: advice, quote, KYC and activation on a phone, in their language.

Project Udyam Digital · Enterprise Track A

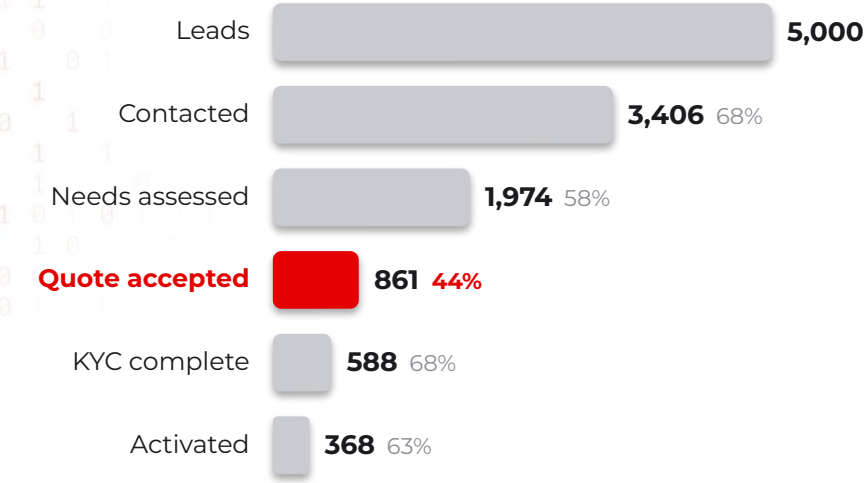

Business case · Team AirtelSync · github.com/AgileSeagull/AirtelSync

THE PROBLEM

Only 7.4% of small-business leads become customers

7.4%
of leads activate

17.6 days
from lead to activation

₹15,053
spent per activation

3.0
calls chasing status, per customer

1,624 of the 4,632 lost leads (35%) dropped for reasons a digital journey removes: no visit possible (827), slow or confusing quotes (385), paperwork and documents (273), installation delays or no fibre (139).

Source: smb_leads.csv, 5,000 leads, Apr–Jun 2026 (synthetic). Cost per activation = total acquisition cost ÷ activations.

WHO WE TARGET FIRST (Q1)

Lead with professional offices; micro retail goes self-serve

SEGMENT	SHARE	ACTIVATION	COST / ACTIVATION	MEDIAN BUNDLE	6-MO CHURN	PLAY
Professional offices	25%	11.1%	₹10,695	₹6,575	14%	1 · Lead segment: self-serve + inside sales
Small multi-site	15%	11.0%	₹15,614	₹28,080	11%	2 · Digital quote, field-assisted rollout
Small manufacturers	6%	12.8%	₹15,324	₹15,910	8%	3 · Field sales for leased lines and IoT
Micro retail & services	54%	4.1%	₹20,007	₹2,470	23%	Volume · Self-serve only (app + WhatsApp)

Dukaan Digital
Kirana, 2 people, Patna

₹3,004/month incl. GST

Biz Fibre 100 · 2 business SIMs · Cloud POS & UPI billing

No setup fee · live in 5 days

Clinic & Office Pro
Dental clinic, 12 staff, Kochi

₹6,701/month incl. GST

Fibre 300 · 2 SIMs · 2 CCTV · email ×7 · security · backup

₹4,248 setup · live in 5 days

Chain Connect
Restaurant chain, 6 outlets, Pune

₹23,339/month incl. GST

Fibre 300 ×6 · failover ×6 · POS ×6 · 3 SIMs

₹28,320 setup · live in 5 days

Factory Line
Textile unit, 80 staff, Surat

₹18,308/month incl. GST

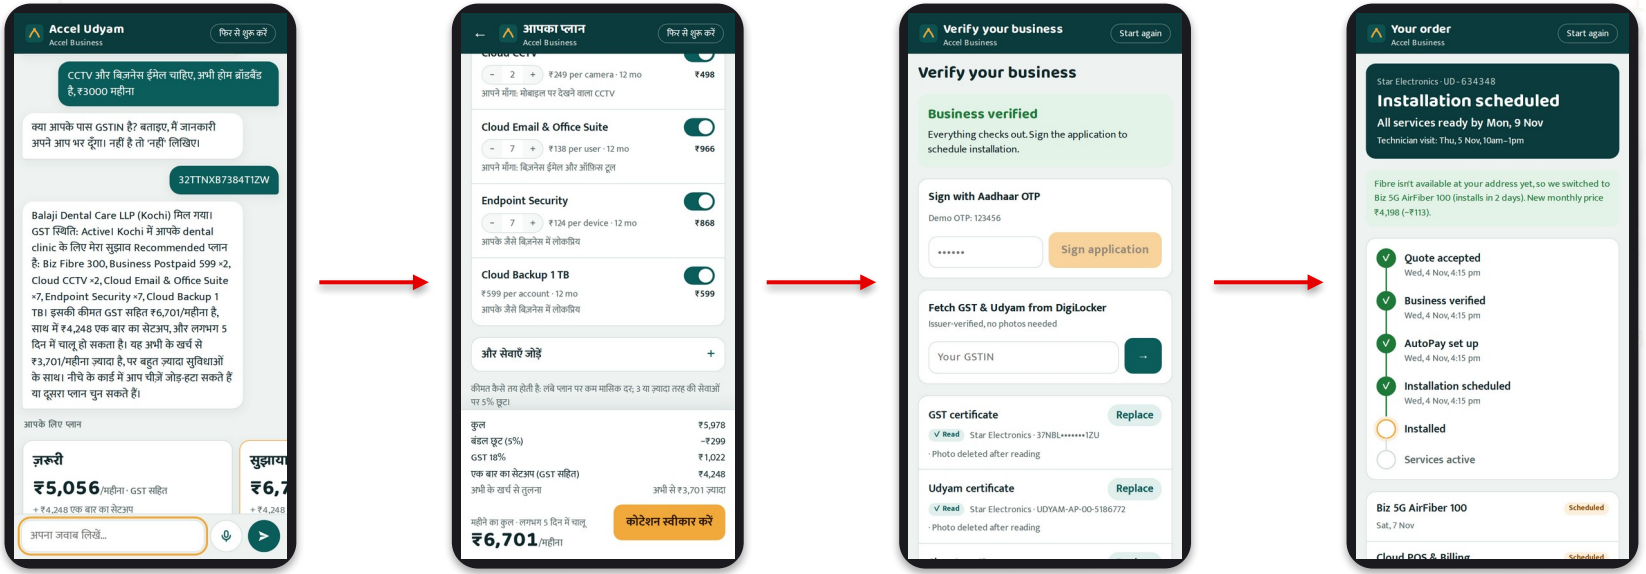

Leased line 20 · 8 machine IoT · 4 SIMs · email · security

₹40,120 setup · live in 21 days

Segment economics from smb_leads.csv (Q2 activations). Bundles: the prototype's recommendation engine, 12-month plans; 24 months is cheaper.

THE SOLUTION

From “what do I need?” to activated, in one sitting

1 Talk

≤6 questions in 10 languages, by text or voice; GSTIN fills the details

2 Choose

One monthly price incl. GST; switch add-ons on/off; 12 or 24 months

3 Verify

Consent, DigiLocker or a photo, checked against GST & Udyam; e-sign

4 Track

AutoPay, technician slot, live ETAs and WhatsApp updates; no calls

Screens from the working prototype (Hindi conversation, quote builder, Smart KYC approved, tracker after a fibre-to-AirFiber reroute).

Platform Partner unstop

NEEDS DISCOVERY WITHOUT A SALESPERSON (Q2)

The AI talks. The rules decide.

1. **Talks like a good advisor**
   Gemini (or Claude) chats in the owner's language, by text or voice, and asks at most six questions.

2. **Knows the business already**
   A GSTIN lookup fills the name, city and registration status, so fewer questions and no typos.

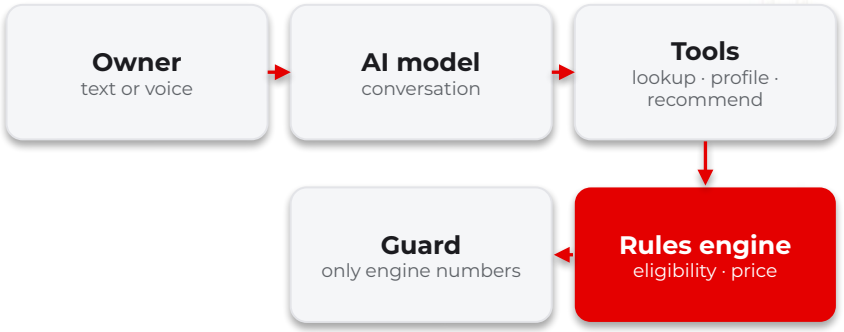

3. **Never invents a price**
   Eligibility, dependencies and prices come from a rules engine over the catalogue; a guard blocks any number the engine didn't return.

4. **Explains and hands over**
   Three options with a reason for every item; a person calls back on request or above ₹25k/month.

49 / 49
rule-breaking sales from Q2 rejected by the engine

5,000/5,000
lead profiles get a valid bundle

30 / 30
advisor test conversations pass (English, Hindi)

Tested with the prototype's eval harness; if the AI is unavailable the advisor continues in a rule-based mode, so the journey never dead-ends.

NEAR-INSTANT KYC, DPDP-COMPLIANT (Q3)

Documents checked in seconds, against the source of truth

1 Quality blur score, auto-straighten

2 Completeness GST/Udyam, signatory ID, address proof

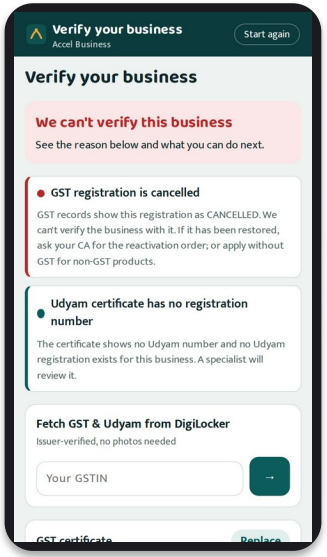

3 Format GSTIN checksum repairs OCR errors

4 Registry GSTIN active? names & address match records

5 Consistency & recency same business everywhere; bill ≤ 90 days

12 SAMPLE APPLICANTS, ALL CALLED CORRECTLY

K01 Blocked GSTIN cancelled	**K02** Approved tilted scan fixed	**K03** Approved clean
K04 Fix photo too blurry	**K05** Fix Udyam missing → confirm	**K06** Approved clean
K07 Review legal name altered	**K08** Approved clean	**K09** Approved clean
K10 Approved clean	**K11** Fix bill > 90 days old	**K12** Approved clean

Privacy by design consent per purpose, nothing pre-ticked · documents read on our servers, not sent to the AI · photos encrypted and deleted once decided · IDs masked everywhere · every access audit-logged

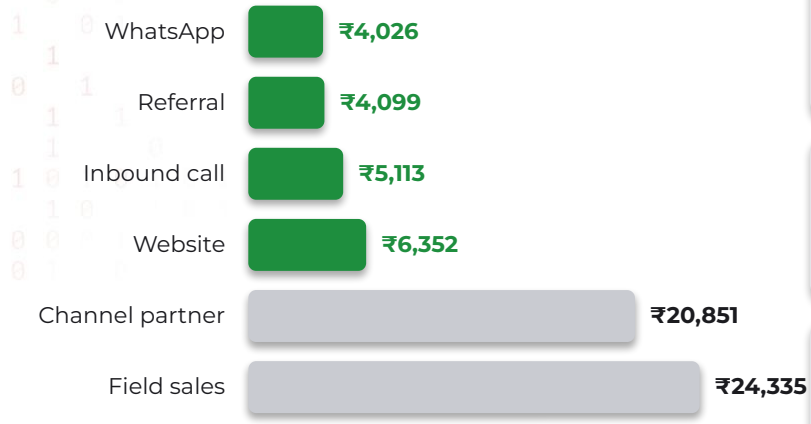

K01–K12: specimen documents and mock GSTIN/Udyam registries from the case pack; verdicts from the prototype vs our own answer key.

FIELD FORCE & PARTNERS (Q4)

People where they add value, paid for activations

COST PER ACTIVATION BY CHANNEL, Q2

Digital channels cost a fifth as much per customer. People should do the work digital can't.

Inside sales

Call the leads the advisor didn't close, best first. The lead score lifts conversion: the top 10% activate at 18.2% vs 7.4% overall.

Field sales

Multi-site chains and manufacturers: leased lines, site surveys, SD-WAN. The quote and KYC are done online before the visit.

Channel partners

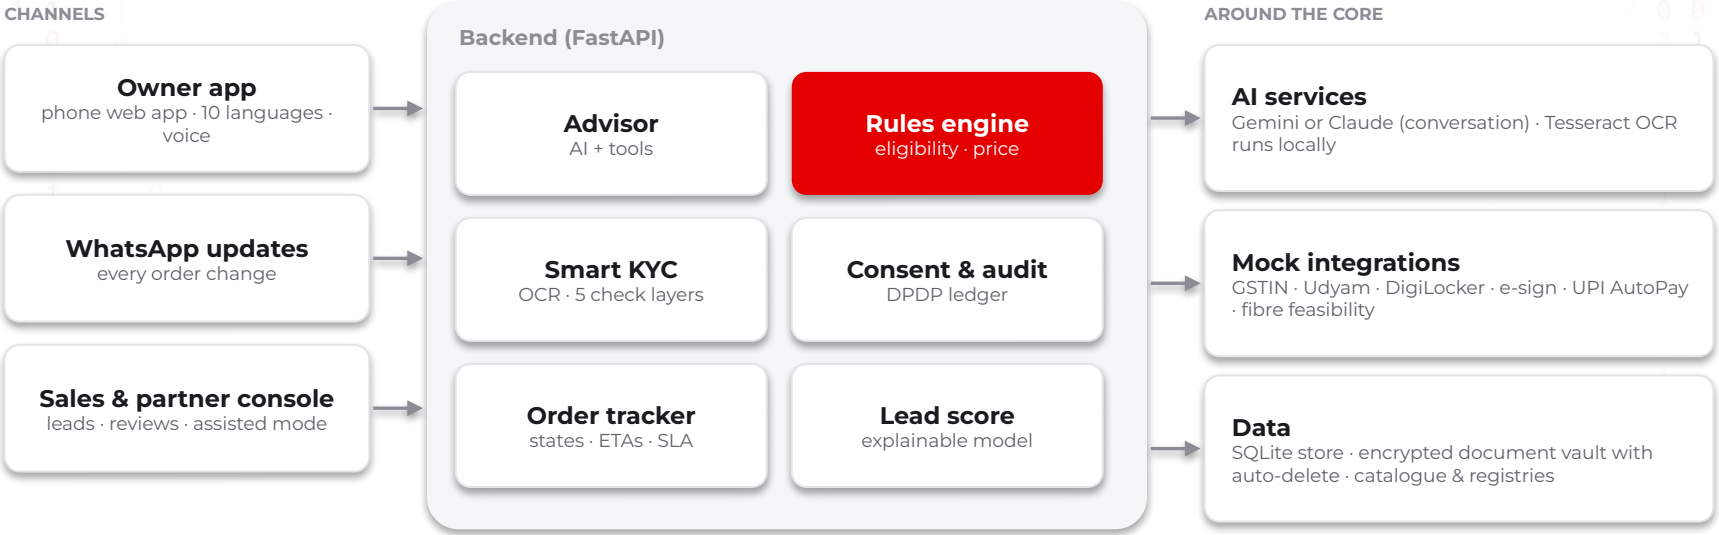

Tier-2 micro retail: installers and assisted sign-up on the owner's own journey (the owner shares a code). Paid on activation, not on leads.

Win-back: 3,026 Q2 leads lost before a needs assessment (unreachable, no time for a visit) get a WhatsApp link to the self-serve advisor.

Cost per activation = acquisition cost of all leads from a channel ÷ its activations (smb_leads.csv). Lead score tested on June leads it never saw (AUC 0.70).

HOW IT'S BUILT

A working prototype: rules at the core, AI at the edges

Tested 112 automated tests · 30 advisor conversations · 12/12 KYC applicants · 4 end-to-end browser journeys · code: github.com/AgileSeagull/AirtelSync

Government and payment integrations are mocks behind the interfaces a production adapter would implement.

HOW WE MEASURE SUCCESS (Q5)

Five numbers, measured from day one

METRIC	Q2 BASELINE	6-MONTH TARGET	WHAT MOVES IT
Lead → activation	7.4%	**15%**	Self-serve advisor, instant quote, online KYC
Lead → activation time	17.6 days	**≤ 7 days**	Same-day KYC, feasibility before payment, parallel installs
Cost per activation	₹15,053	**≤ ₹5,000**	Digital-first acquisition; partners paid on activation
Status-chase calls per customer	3.0	**≤ 0.5**	Live tracker and proactive WhatsApp updates
6-month churn	15.2%	**≤ 10%**	Right-fit bundles, no rule-breaking sales, fewer delays

Micro retail pays back in ~2 months, not 8
Today ₹20,007 to acquire a ₹2,470/month customer. Digital channels cost ₹4,000–6,400 per activation.

Zero rule-breaking sales
Q2 sold 49 ineligible items and activated 22 customers on cancelled or suspended GSTINs. The rules engine and KYC block both.

Baselines from smb_leads.csv (368 activations, Apr–Jun 2026). Targets assume pilot results in two cities; all five are tracked live in the console.

ROLLOUT & RISKS

An 8-week pilot, then scale city by city

Weeks 0–8 · Pilot
Pune + Kochi · professional offices and micro retail · web + WhatsApp · 2 partner networks

Months 3–6 · Scale
10 cities · voice in 6 languages · live GSTN, Udyam, DigiLocker, UPI AutoPay

Months 6–12 · National
All tier-1/2 cities · partner app · field-assisted multi-site and manufacturing

RISK	MITIGATION BUILT INTO THE PROTOTYPE
AI gives wrong advice	AI only talks; rules decide eligibility and price; output guard; tested scenarios; rule-based fallback
Forged or altered documents	Registry checks on every number, cross-document matching, specialist review, Aadhaar e-sign
Privacy (DPDP Act 2023)	Purpose-wise consent, minimal data, photos deleted after decision, masked IDs, audit log
Channel conflict	Partners paid on activation and can complete the owner's own journey with consent
Install delays, no fibre	Feasibility before payment, automatic switch to 5G AirFiber, SLA alerts and escalation

Ask: approve an 8-week, two-city pilot with one inside-sales pod and two partner networks; success = the five metrics on the previous slide.
